Job Title: Senior Java Developer
(Java, Node.js, React, MySQL, ClickHouse, AWS)

Responsibilities
- Backend & API development using Java and Node.js
- Frontend feature implementation with React
- Query optimization for MySQL and ClickHouse databases
- Cloud operations and infrastructure management on AWS
- CVE triage, patching, and remediation across the entire stack
- Package management for Node.js, Python, DB-access libraries, and jQuery
- Code review and technical mentorship for junior team members
- Collaboration with cross-functional teams including product, design, and QA
- Architecture design and technical decision-making for new features

Required Qualifications
- **5+ years** of professional software development experience
- **3+ years** of hands-on Java development (Spring Boot, Hibernate, Maven/Gradle)
- Strong proficiency in JavaScript/TypeScript, Node.js, and React.js
- Proven experience with MySQL database design, optimization, and performance tuning
- Hands-on experience with ClickHouse or similar columnar databases
- **2+ years** of AWS cloud experience (EC2, S3, RDS, Lambda, VPC, CloudWatch)
- Demonstrated experience in dependency management and CVE remediation
- Experience with version control (Git) and CI/CD pipelines
- Strong understanding of RESTful API design and microservices architecture
- Experience mentoring junior developers and conducting code reviews

Nice-to-Have Skills
- Experience with containerization (Docker, Kubernetes)
- Knowledge of security best practices and DevSecOps
- Familiarity with Infrastructure as Code (Terraform, CloudFormation)
- Experience with monitoring and observability tools (Prometheus, Grafana, Datadog)
- Understanding of agile development methodologies
